Materialism Transcends Itself. The Worlds 1,2 und 3.  
Materialism Criticized . Some Remarks on the Self.  
Historical Comments on the Mind-Body Problem. Summary.—  
The Cerebral Cortex. Conscious Perception. Voluntary  
Movement. The Language Centres of the Human Brain.  
Global Lesions of the Human Cerebrum. Circumscribed  
Cerebral Lesions.—The Self-Conscious Mind and the Brain.  
Conscious Memory: The Cerebral Processes Concerned in  
Storage and Retrieval.—Dialogues.

In Part I, Popper discusses the philosophical issue between dualist or even pluralist interactionism on the one side, and materialism and parallelism on the other. There is also a historical review of these issues.

In Part II, Eccles examines the mind from the neurological standpoint: the structure of the brain and its functional performance under normal as well as abnormal circumstances, for example when lesions (especially those surgically induced) are present. The result is a radical and intriguing hypothesis on the interaction between mental events and detailed neurological occurrences in the cerebral cortex.

Part III, based on twelve recorded conversations, reflects the exciting exchange between the authors as they attempt to come to terms with their conflicting opinions. This part preserves the intimate quality of these dialogues, and shows how some of the authors' viewpoints changed in the course of these daily discussions.

# **INDEX TO SCIENTIFIC & TECHNICAL PROCEEDINGS™**

There has never been an effective way to search the proceedings literature. Until now.

Now, ISI introduces the **Index to Scientific & Technical Proceedings**—the first multidisciplinary tool to conference proceedings and the individual papers published in them—the effective answer to the problem of searches in the proceedings literature.

## **Current and Comprehensive . . .**

**ISTP™** indexes 3,000 proceedings annually—over 80,000 individual papers—from conference proceedings published in book form and in the journal literature. Broad coverage includes: life sciences • clinical medicine • engineering and applied sciences • physical and chemical sciences • biological, environmental and energy sciences. **ISTP** is issued monthly and cumulated twice a year, so you get the index to proceedings shortly after their publication.

## **. . . and Effectively Indexed.**

An unequaled system of indexes offers you effective searches with a minimum of starting information. You can locate complete entries of proceedings and papers—in an easy-to-read contents page format—with just a speaker's name . . . a sponsor . . . even a speaker's organizational affiliation. Or by conference topic, title words, or geographical location. And you get all the data you need to order books or request interlibrary loans. You even get first authors' addresses for reprint requests.

**ISI's Index to Scientific & Technical Proceedings offers an effective new approach to locating the scientific and technical information in conference proceedings.** Subscriptions will begin in 1978, at \$500 annually. Use the coupon below to enter your order today.
